

FOR IMMEDIATE RELEASE

Laars-Stor® Stainless Steel Indirect Water Heater

Laars is excited to announce the release of the new and improved Laars-Stor Stainless Steel, Single-Wall indirect water heater!

The Stainless Steel Tank and Heat Exchanger are made from chromoly - titanium ferritic 444 stainless steel alloy for long, trouble free life.

All Laars-Stor units (excluding LS-SS-120L) have a factory-installed Sediment Reducing Inlet Tube which increases first hour rating of hot water while minimizing temperature build-up in tank. Each unit is supplied with a fast-acting immersion aquastat for automatic temperature control (adjustable from 80-160°F). Two inch non-CFC foam insulation covers the sides and top of the tank, reducing heat loss. This results in less energy consumption, improved efficiencies, and jacket rigidity.

These water heaters are rated by AHRI to provide accurate performance data for proper comparison of hydronic appliances.

Units are available for immediate shipment in 30, 40, 50, 75 and 120 gallon sizes.
