

FOR IMMEDIATE RELEASE

Laars NeoTherm is Now Certified to be Common Vented

Laars is pleased to announce that NeoTherm boiler and volume water heater models 80-500 are now certified to be common vented (up to 8 units) with each other, using Centrotherm InnoFlue polypropylene piping products.

These common vent systems require Centrotherm InnoFlue components as well as non-return valve kits that are now available from Laars. Each Laars kit contains one appliance adapter, one connector ring, one non-return valve, and centric increasers as needed.

Kit instructions show the manufacturer's part numbers for the required Centrotherm items, and more detailed information about the common vent systems. The instructions are available via the Laars website, www.laars.com.
